

Data Modelling and Form Design

Aim

To design and develop a **Bank Loan Application** using **Zoho Creator** by creating a structured form, applying appropriate validations, and generating a report for managing loan applications.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

In this experiment, a **Bank Loan Application** is designed to collect applicant details, contact information, employment and income details, loan requirements, existing liabilities, and credit-check consent. The form is divided into four sections: **Personal Details**, **Contact Details**, **workouts & customer Details**, and **loan Details & Consent**.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, positive income values, minimum age of 18 years, and compulsory credit-check consent. The submitted data is displayed in the **Bank Loan Application** for review and pre-screening.

Procedure

1. Open **Zoho Creator** and create the **Bank Loan Application** application.
2. Create the **Bank Loan Application**
3. Add the required fields for applicant, contact, employment, schedule, and consent details.
4. Organize the fields into the four specified sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form.
7. Enter sample applicant details and submit the form.
8. Create the **Bank Loan Application** and verify the submitted records.
9. Filter the records based on loan type and monthly income for pre-screening.
